

Jayasoorya Suryadas

DevOps Engineer | CI/CD · AWS · Docker · Terraform
jayasuryabrocamp@gmail.com | +91 82810 17439 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)
Kochi, Kerala, India | Open to relocate: Bengaluru / Hyderabad

PROFESSIONAL SUMMARY

DevOps-focused engineer with hands-on experience building CI/CD pipelines, containerizing applications with Docker, and provisioning and deploying production workloads on AWS (EC2, VPC, RDS, S3, IAM, ECR, SSM, CloudFront, Route 53) using Terraform and GitHub Actions. Built automated pipelines with image-digest deployments, health checks, and automatic rollback, and set up Prometheus and Grafana monitoring for API, worker, and host health. Keeps live client applications running in production and troubleshoots issues end to end. Comfortable with Git, Linux, and Node.js/TypeScript scripting, backed by a 28-week intensive full stack bootcamp (Brototype Kerala). Eager to learn, collaborative, and documentation-minded, ready to contribute to a DevOps team from day one.

TECHNICAL SKILLS

CI/CD & Automation: GitHub Actions, CI/CD Pipeline Design, Automated Build/Test/Deploy, Image-Digest Deployments, Health Checks, Automatic Rollback, Dependency & Security Scanning, BullMQ Job Queues, Cron Jobs

Cloud & Infrastructure: AWS (EC2, VPC, RDS, S3, CloudFront, IAM, ECR, SSM, Route 53), GitHub OIDC, Terraform (Infrastructure as Code), Cloudflare, Nginx, HTTPS/SSL, Vercel

Containers: Docker, Docker Images & Containers, Dockerode (programmatic container control), ECR image registry

Monitoring & Observability: Prometheus, Grafana, Node Exporter, Application Metrics, Log Streaming, Production Troubleshooting

Scripting & Languages: JavaScript (ES6+), TypeScript, Node.js scripting, Linux command line, HTML5, CSS3

Version Control & Tools: Git, GitHub, Linux, Postman, Agile, SDLC, Technical Documentation, Team Collaboration

Backend & Databases: Node.js, Express.js, REST APIs, JWT, RBAC, PostgreSQL, MongoDB, Redis/Valkey, Prisma, Sequelize, Mongoose, Socket.io

Frontend & AI: React.js, Next.js, Redux Toolkit, Tailwind CSS; Groq AI API, LLM Integration, AI Agent Development

PROFESSIONAL EXPERIENCE

Freelance Full Stack & DevOps Developer

Jan 2025 – Present

Self-employed

- Designed, deployed, and operate production applications for live clients (NasaLogistic, Dental Buddy, Woobe) on AWS, handling infrastructure, CI/CD pipelines, DNS, SSL, and monitoring.
- Automated build, test, and deployment workflows with GitHub Actions and Docker, with health verification and automatic rollback to keep releases reliable.
- Managed full project lifecycle independently: client requirements, architecture, development, testing, deployment, and ongoing production support.

Full Stack Developer

Jan 2026 – Jun 2026

Professional Collaboration (6-month contract)

- Collaborated with a senior full-stack developer on real-world production projects, gaining hands-on exposure to production-level code, clean architecture, and professional development workflows.
- Participated in code reviews, best practices enforcement, and delivered features in a professional team environment.

PROJECTS

Woobe — Fashion, by Weight — Full-Stack E-Commerce Platform (Freelance)

github.com/jsurya114/Woobe-ecommerce

Tech Stack: Terraform, AWS (VPC, EC2, RDS, S3, CloudFront, ECR, IAM, SSM), Docker, GitHub Actions, Prometheus, Grafana, Nginx, Cloudflare, TypeScript, Next.js, Node.js, PostgreSQL, Redis/Valkey

A production-deployed, mobile-first fashion e-commerce platform with weight-based pricing, co-developed with Jasil M for a real client.

- Provisioned production AWS infrastructure with Terraform, including VPC, EC2, RDS PostgreSQL, S3, CloudFront, ECR, IAM, GitHub OIDC, SSM, and Valkey/Redis, with Cloudflare, Nginx, and HTTPS.
- Built GitHub Actions CI/CD for linting, type checks, tests, dependency and security checks, Docker image builds, and ECR pushes, with SSM-based deployment by immutable image digest, health verification, and automatic rollback.

- Implemented Prometheus and Grafana observability with Node Exporter and application metrics for API, worker, and host health; selected EC2 + Docker for the initial architecture after evaluating projected traffic, operational complexity, and client budget.
- Developed 1,000+ automated tests covering application logic, real-database integration, concurrency, payments, security and deployment workflows.
- Co-developed the mobile-first platform with separate Next.js storefront, admin, and API applications on a Clean Architecture TypeScript/Node.js backend, including Razorpay payments with verified webhooks and RBAC.

Version Vault — CI/CD Platform & Version Control System

github.com/jsurya114/Version-Vault

Tech Stack: Docker, Dockerode, Socket.io, Redis, BullMQ, AWS EC2, AWS S3, Cloudflare, React 18, TypeScript, Node.js, Express.js, MongoDB, Groq AI

An AI-integrated, GitHub-like CI/CD platform built from scratch to manage code repositories, track issues, and run automated pipelines.

- Engineered automated CI/CD pipelines running inside isolated Docker containers via Dockerode, with real-time log streaming to the frontend using WebSockets (Socket.io) — reducing manual deployment effort to zero across 10+ pipeline configurations.
- Built a high-performance async job queue using Redis and BullMQ handling concurrent Git operations without blocking the main server, supporting multiple simultaneous pipeline executions.
- Deployed backend on AWS EC2 proxied through Cloudflare for DNS management, edge-caching, and SSL/HTTPS encryption; frontend on AWS S3.
- Built an AI-powered repository creation agent using Groq AI that scaffolds and initializes repositories from a prompt without manual setup.

NasaLogistic — Driver & Logistics Management Platform (Freelance)

github.com/jsurya114/nasa

Tech Stack: AWS EC2, AWS RDS (PostgreSQL), Route 53, Vercel, Node.js, Express.js, Sequelize, React.js, Tailwind CSS

A production-ready logistics platform for managing driver availability, order workflows, and admin operations, built and deployed for a real client.

- Deployed backend on AWS EC2 with Route 53 DNS and frontend on Vercel; managed PostgreSQL on AWS RDS with normalized schemas and timezone-aware operations.
- Operating as a production-level application handling around 200 active users, demonstrating reliability and stability under real-world day-to-day logistics operations.
- Built REST APIs with JWT authentication, RBAC, bcrypt hashing, rate limiting, cron-based weekly resets, and Excel report generation across 3 user roles.

Dental Buddy — Smart Dental EMR System (Freelance)

github.com/jsurya114/Dental-Buddy

Tech Stack: React 18, Vite, Redux Toolkit, Tailwind CSS, Node.js, Express.js, MongoDB, JWT, bcrypt, Helmet, CORS

A comprehensive EMR system for dental clinics with role-based access and clinical documentation, actively used in a live dental clinic.

- Implemented 5-level RBAC (Super Admin, Clinic Admin, Doctor, Receptionist, Billing Staff) with multi-clinic data isolation in a system actively used in a live dental clinic.
- Built JWT-based authentication with refresh tokens, HTTP-only cookies, bcrypt hashing, Helmet, CORS, and rate limiting for enterprise-grade security.
- Developed context-aware clinical modules — Case Sheets, Prescriptions, Imaging, Appointments, Billing, and Analytics — strictly scoped to patients.

EDUCATION

Bachelor of Computer Application (BCA) — Computer Science

Jan 2021 – Jan 2024

Bishop Speechly College for Advanced Studies, Pallom — Mahatma Gandhi University, Kerala

Full Stack Development (MERN Stack)

Nov 2024 – Present

Brototype Kerala — Intensive Full Stack Development Bootcamp (Industry-equivalent, Project-based)

- 28 weeks of intensive learning covering Docker, AWS, Node.js, TypeScript, MongoDB, Express.js, and React.js, with a focus on production-grade delivery.

Higher Secondary Education — Computer Science

Jan 2019 – Jan 2021

NSS Higher Secondary School, Perunna, Changanacherry, Kottayam
